

Using a Revolution Rope™ for the first time?

Examine The Tip Xcelerator™

The first thing you will notice is our special polyolefin wrap, or Tip Xcelerator (patent pending), that comprises the added weight. We performed extensive tests to develop a material with the optimum combination of weight, durability, and flexibility. There is no special care required for the Tip Xcelerator. Under normal use, it will outlast the rope body.

Confirm Your Revolution Loop Size

It is important that you purchase the correct loop size. The loop size is indicated on the color coded label behind the honda. To confirm your loop size, simply swing your loop and stop your swing at the size you would throw - not what you start with. Now check the location of the Tip Xcelerator relative to the tip as shown on the chart. When checking your loop size, keep in mind that some ropers feed a little bit more on the last swing. If you are not satisfied with your loop size, unused ropes with no wear may be exchanged.

Breaking in your Revolution Rope

The Tip Xcelerator does not require any special break in. However, we recommend that you stretch your rope or break it in on a few steers before competing. It is okay to rope the dummy several times to get a feel for your loop, but roping the dummy extensively prior to stretching will generally cause any rope to twist.

Using Your Revolution Rope

Using a Revolution Rope for the first time takes a little getting used to. Rope the dummy a few times to get a feel for the Tip Xcelerator. If you are consistently splitting the horns, you may need a larger loop size. However, before you change size,

try backing off of your delivery and holding onto your loop a little longer to let the tip come around and do the work for you. Likewise for heelers, if you find that your tip is shooting too far through, back off of your delivery and focus on getting your bottom strand down. The tip will help pull the top and bottom strands around to the inside foot. If your rope doesn't feel perfect on the dummy, that's okay - the arena is the real test. Our ropes are designed for arena speeds and conditions, which cannot be replicated on a dummy. Remember, the Tip Xcelerator is designed to do more of the work so you can concentrate on the delivery and not the

action. It will also give you more distance with less effort, so you won't have to force your delivery.

Our Goal

We are in business to help you increase your catches and your winning percentage. Our technology has been field tested and proven, and we know that given a chance, it will help you rope better. We combine our technology with the highest quality rope bodies on the market to produce the best ropes ever made for competitive roping. We know there are plenty of conventional ropes on the market, and we appreciate you choosing Revolution Ropes.
