N/A = Not Applicable

Notes:

- 1.&2. Dummy is removable, but horn positioning is not realistic, and base is hollow. Requires adult strength & height to remove or place dummy on sled.
3. Ideal for logging or pulling around by the horns for your heeler. Machines with collapsible horns must be pulled by tow bar, or neck.
4. Depends on dummy positioning and security of dummy attachment.
5. Something Steer is light enough to be towed with the **Bad Handle Bungee**TM that offers more sporadic & realistic movement & the safest dally practice for roper & horse. Spring loaded tongues with other sleds stretch less than 2 feet. Bad Handle Bungee stretches up to 10 feet. Something Steer ± 130 lbs, easier on tow vehicle and easier to load; Time Machine, Hot Heels, Heelomatic, Switch ± 300 lbs; Smarty ± 175 lbs.
6. Horns are angled or positioned back for rope release rather than low and forward for realistic angle of attack.
7. Hopping motion not necessary for fundamental training.
8. Legs collapse and retract without noisy, heavy springs. Left and right hocks come together and crossover.
9. **Nasty Dragger**TM adjustable hips move up and down for extreme dragger practice.
10. Head Ducker adjustment allows dummy to tilt left or right for head ducker practice.
11. **Corner Shot**TM rotating hips allows legs to be secured outside or inside for continual practice of "bad" shots.
12. Price with wheels. Wheels necessary to function effectively, especially when pulling with a horse.
13. Entire steer body must be adjusted to adjust legs.
14. Legs swing come out but come back in instantaneously. Legs do not swing to the inside.
15. Heelomatic Drifter and Smarty toes come together and do not operate independently. Rope Rite Cross legs come together with double spring system, with wooden legs that operate dependently.
16. Interchangeable horns (standard), Optional **Super Horns**TM, Optional **Super Hocks**TM, **Optional Something Hitch**TM for use with standard **Something Hocks**TM, optional Something fence attachment for Something Hocks.
17. Interchangeable horns for varying lengths.
